

# impero education pro

## product feature datasheet Impero Education Pro on Chromebooks

Chromebooks are easily accessible, purposely built for schools and offer an array of learning opportunities. That's why education has seen rapid adoption of these devices in classrooms, as a way to transform the traditional teaching space and improve students' learning.

Impero Education Pro is compatible with Google Chrome OS and is the only client-server solution offering classroom management functionality for education establishments using Chromebooks to enhance learning.

### the benefits

#### cross-platform solution

Impero Education Pro's mobile device compatibility supports a mixed platform approach to digital learning, allowing teaching and IT staff to view different devices in one session from the console. The OS type for each device is displayed within the thumbnail, so teachers and IT staff can easily distinguish activity between devices.

#### save time

The ability to broadcast screens, send messages and remote control Chromebooks enables teachers to respond to students in a quick and efficient manner.

#### focus learning

Live thumbnails of Chromebooks, combined with block policies and monitoring, hands classroom control back to the teacher, removing the distractions offered up from the online world and keeping students focused on the task at hand.

#### keep students safe

Impero Education Pro's Chromebook compatibility enables acceptable boundaries to be imposed through blocks, on-the-fly monitoring and website logs, ensuring e-safety across a mixed platform approach.

# the features

## features

- › AD user authentication
- › view thumbnails
- › web history logs
- › enable/disable internet
- › block/allow websites
- › broadcast teacher screen
- › lock screen
- › save screen shot
- › send message
- › chat
- › quick question
- › run websites
- › remote control
- › monitor URLs and html
- › force Google safe search
- › force YouTube EDU redirect

## benefits for teachers

- › keeps students safe
- › saves time during lessons
- › enables effective control in the digital classroom
- › identifies Chromebook users in the console
- › provides students with better access to useful resources and research opportunities
- › enables discreet live monitoring of student screens (no need to request user permission to view a screen)
- › increases student-teacher communication

## benefits for network managers

- › ensures student safety when rolling out Chromebooks
- › simplifies device management
- › forces users to log in using AD credentials for simple identification of students and staff in the console
- › helps to facilitate BYOD schemes
- › provides a complete view of activity for monitoring and management purposes
- › helps to prove misuse through website history logs

## benefits for senior leadership teams

- › supports 1:1 and BYOD schemes
- › provides access to website logs/reports to help evidence misuse and take appropriate action
